Introduction

The objective of this tool is to provide a control client to configure Business Event Generator (BEG) so as to translate ECReports to specific EPCIS Events by taking in consideration the previously defined Master Data. Moreover, it provides a view which is able to show the real time processed readings for each event served at that time.

Requirements

Hardware (minimum)

- P IV 1.2GHz or equivalent

- 512 MB Ram
- 50 MB free HD space

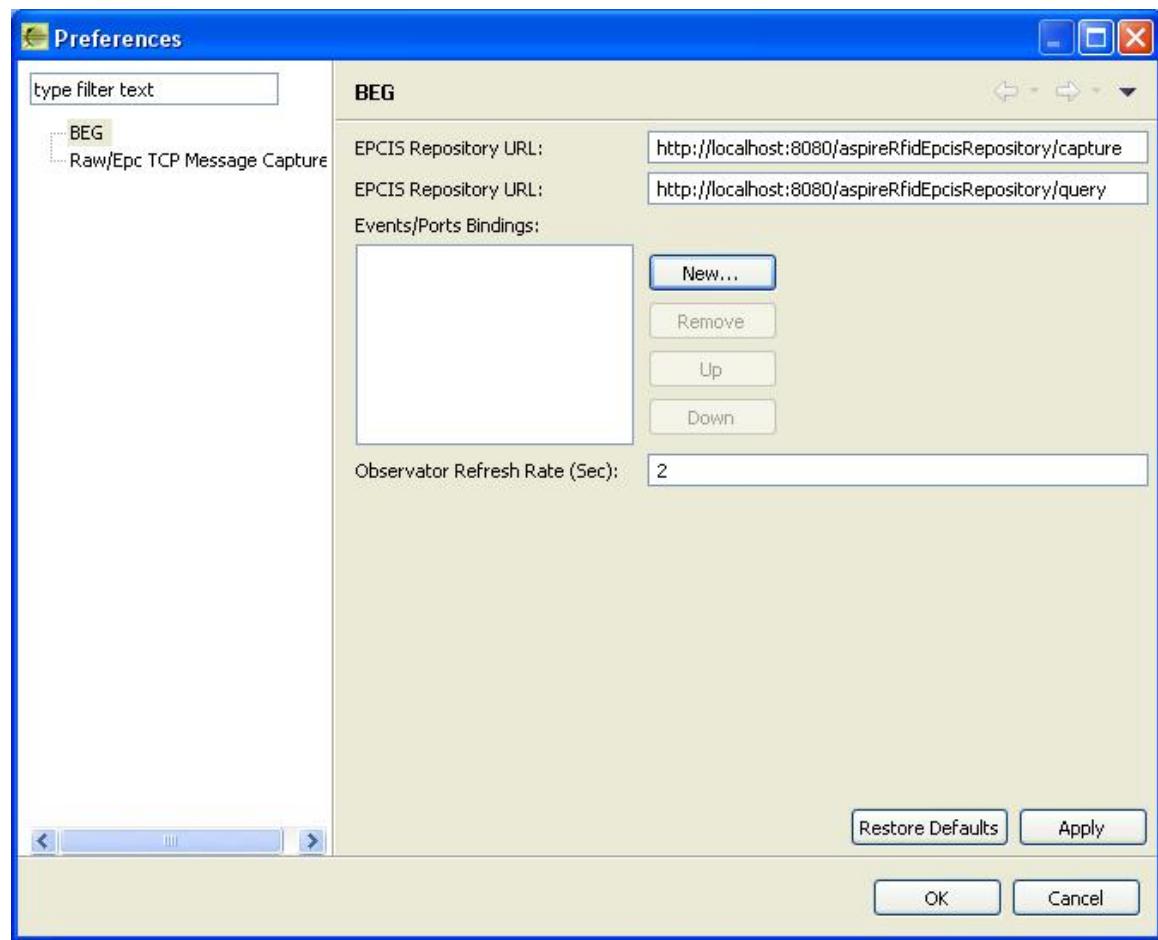

Software

- [EPCIS Repository](#)
- [Business Event Generator](#)
- Java 1.6
- [Eclipse 3.4](#) and above (with RCP/Plug-in Development Environment plug-ins and [Subversive plug-in](#))
(required only for developers)

Users Guide

Download & Run You can download the aspireRfidIDE RCP application with the aspireRfidIDE-beg plug-in from the [AspireRFID forge](#) under "AspireRFID IDE" package. Just decompress it and hit the "aspireRfidIDE" executable Configuration

The BEG Configurator is configured through the IDE's preferences window (Window -> Preferences) by choosing the BEG from the list appearing at the left see the picture below.

Here you can configure the:

- **EPCIS Repository Capture Endpoint**: The endpoint that accepts connections for the capturing interface.
- **EPCIS Repository Query Endpoint** : The endpoint that accepts connections for the Query interface.
- **Event/Port Binding**: The predefined event/port bindings.
- **Observer Refresh Rate** : How often the server will update the observer view.

Developers Guide

Business Event Generator Plug-in is an "AspireRfidIDE" product plug-in that is running within its environment. In order to use this plug-in you should first download the "[AspireRfidIDECore](#)". Acquiring the code The "Business Event Generator Plug-in" source code is available for checkout at the AspireRFID forge [SVN](#). Check it out by:

- hitting the create new repository location button at the SVN Repositories view of the Eclipse's subversion plug-in and by using the following URL at the window that appears:

`svn://svn.objectweb.org/svnroot/aspire/trunk/AspireRfidIDE/AspireRfidldePlug-ins/aspireRfidlde-beg/`

- right click the repository that has been just created and hit the check out button
- check the aspireRfidlde-beg project on the list and hit ok

Running the Project

For running AspireRfidIDE with the aspireRfidlde-beg Plug-in:

- Create an aspireRfidIDE project (unless you already have created one)
- Go to the aspireRfidlde project Run Configurations (Run>Run Configurations...) and at the list choose Eclipse Application>aspireRfidlde.product
- At the Main tab of the "aspireRfidlde.product" set Run a product: aspireRfidlde.product
- At the Plug-ins tab of the "aspireRfidlde.product" hit deselect all button and then choose the aspireRfidlde and org.ow2.aspirerfid.ide.beg and then hit the Add required Plug-ins button.
- Hit apply
- Now you are ready to run the application.
