Aspire :: Bundles :: LibUSB Java Proxy

-
- [1 Installation](#)
 - [1.1 Windows](#)
 - [1.2 Linux](#)
 - [2 Build](#)
 - [3 Misc](#)
-

This bundle uses the LibUSBJava library to develop Java proxies for USB devices (ibuddy, acsacr122, ...).

1 Installation

Read http://libusbjava.sourceforge.net/wp/?page_id=8 1.1 Windows Copy the 2 files in the system

copy libusb0.dll C:\windowssystem32 copy libusb0.sys C:\windowssystem32drivers

For other devices (ibuddy, acsacr122, ...), copy the *.inf files in C:\WINDOWS\system32\inf for other 1.2 Linux In order to use LibUSBJava, you must stop the HID module and the USB module : this avoid an auto-mount of the device

2 Build

1. mvn install:install-file
2. mvn clean install

3 Misc
