

Aspire Wiki - ObjectWeb - EditRightsHelp

[EditRightsHelp](#)

Rights applied to a document replace rights applied to a space and rights applied to the whole wiki.

Users: this field should contain the wikiname of each user you want to apply the rights to. For example "XWiki.JohnDoe". "XWiki.XWikiGuest" should be used for unidentified users.

Groups: this field should contain the wikiname of each group you want to apply the rights to. "XWiki.XWikiAllGroup" represents the group of all logged-in users with an account on your Wiki. "xwiki:XWiki.XWikiAllGroup" represents the group of all logged-in users using an XWiki.com account.

Access Levels: this field should contain a list of access levels that you want to apply to the users and groups specified. Available access levels are: admin, edit, view, comment. To protect your wiki in view and edit mode use "view, edit". To protect adding comments use "comment".

Allow/Deny: this field should contain "Allow" to specify that this is an allow right, and "Deny" to specify a deny right. An allow right means*: "this wiki, space or document is **only** visible or editable to the users or groups specified".

To protect a Wiki or Space by allowing only logged-in users using an account created on your Wiki use:

- Groups: XWiki.XWikiAllGroup
- Users:
- Access Levels: "edit" for a private wiki for editing, "view, edit" for a private Wiki for viewing and editing.
- Allow/Deny: Allow

To open a Wiki for editing by the public:

- Groups: XWiki.XWikiAllGroup, xwiki:XWiki.XWikiAllGroup
- Users: XWiki.XWikiGuest
- Access Levels: "view, edit" for a public Wiki for viewing and editing.
- Autoriser/Interdire: Allow

Warning: the preferences (accessible from the drop down menu) allow to force authentication for viewing or editing of your Wiki. Without any authentication forcing and any rights specified a Wiki is public for viewing and editing by default.
